

## Olio Pèppoli 2021

**Vintage**  
2021

### Climate

The 2021 season was characterized by mild and rather rainy winter weather, only at the beginning of April did one brief cold spell affect the area. These climatic conditions led to an early spring which saw limited rainfall and slightly warmer temperatures. Overall, summer was hot and dry and only at the end of August did several rain showers provide necessary water resources for the drupes to progress and ripen. The olive harvest began during the last half of October, slightly later than seasonal averages, and was completed at the beginning of November.

## Olive Sources

All our olives are grown on the Pèppoli estate located in the Chianti Classico area in the township of San Casciano Val di Pesa, at an altitude of 300 – 350 meters above sea level (984 - 1150 feet). The estate extends over a total area of approximately 100 hectares (247 acres) of which 27 (67 acres) are planted with olive groves. The soil is rich in marine deposits from the Pliocene era.

## Historical data

The Pèppoli olive oil is organic. In 1994, the estate decided to organize its production on the basis of the principles of organic agriculture, according to which products derived from chemical synthesis are not be utilized either for control of pests and plant diseases or for fertilizing. After a two-year period of time – that which is required by current legislation, one supervised by the Consortium for the Control of Biological Production, an organism authorized by the Italian Ministry for Agriculture and Forest Resources - during which cultivation was converted from conventional to organic practices and procedures, it was finally possible, in 1996, to obtain “biological certification” for the Pèppoli olive oil.

## The Harvest and the Production Process

The olives were picked from selected olive groves and harvested exclusively by hand before reaching full maturity then sent to the oil mill. Crushing took place within 12 hours of arrival at the mill. The production process began with the removal of leaves and stems with a mechanical separator then the olives were grinded into a paste with a hammermill. The paste was malaxed at a temperature of 20-22 °C (68-72 °F) for period of time that varied between 10 to 15 minutes to allow small oil droplets to aggregate into larger ones; they were separated from the paste and the oil was then extracted by decanter centrifugation. The extraction process was conducted at a low temperature, without the addition of water, to enhance the organoleptic and aromatic qualities. The extracted oil was meticulously selected to guarantee optimal quality and then stored in small stainless-steel tanks hermetically sealed under an inert gas atmosphere, protecting the oil from oxidation and other contaminants. Pèppoli EVOO was bottled in our in-house oil mill in two formats: 0.500 lt. and 0.250 lt.

## Tasting Notes

Pèppoli extra virgin olive oil is bright green in color. On the nose it is intense, fragrant and pungent. The palate is undeniably lively; fruity and harmonious with great balance structure with a typical and pronounced piquant finish.

## Certifications

Codice Organismo di Controllo CCPB: IT BIO 009 – 8197
